Table 1: Normalized high-resolution XPS peak ratios. Peak areas are normalized to the neutral nitrogen (400.0 eV) component. The C_6 carbon is constrained to represent the C_6 carbon of the aromatic ring, as was done in Appendix **??**[?]

	Nitrogen		Carbon			
Sample	N^+	N^0	C=O	C–O/N	C_6	C–C
MeI/ACN treated	**0.23**	1.00	1.00	2.75	0.40	2.53
Untreated	0.05	1.00	1.00	**2.04**	0.40	2.90
Untreated theoretical	0.00	1.00	1.00	3.25	0.50	3.25
$[(R_3NMe^+)_2]CO_3$ theoretical	**0.25**	1.00	1.00	2.60	0.40	2.60
